

Duration:	40 minutes	Total Marks:	30
Paper Date:	13-December-18	Weight	
Section:	EL 1A	Page(s):	1
Exam:	Lab Final	Roll No:	

Q.1 You have to design a system that can generate PWM at P1.0. The user should check the value of register R0. If R0 is equal to one, a PWM of 1 KHz of 25% duty cycle should be sent to P1.0 for 8 seconds and then PWM of 45% duty cycle should be generated on the same pin of the port. If the value of R0 is zero a PWM of frequency 10kHz with 25% duty cycle should be sent to P1.0 for 8 seconds and then PWM of 45% duty cycle should be generated on the same pin of the port. [CLO 5]

Note: You have to make a folder with your roll number and section on desktop ("Rollno_Section_LabFinal"). Copy the code and proteus design screen shot in a word file and copy the word file in the folder.
