

Course:	Communication Skills	Course Code:	SS - 123
Program:	BS (Electrical Engineering)	Semester:	Fall 2018
Duration:	60 Minutes	Total Marks:	25
Paper Date:	15 Nov. 2018	Weight	15%
Sections	All	Pages:	3
Exam	Session 2		

Instruction/ Notes: Avoid cutting/ overwriting. No Answer sheets required.

Name: Ayesha Javed

Section: EE-1

Roll No: L15-4522

	CLO	Passing Scale	Scale Obtd.	Max. Marks	Total Obtd.
Q1	07	4	12.5	15	21.5
Q2	05	3	9	10	

Q1. (a) Identify the types of listening barriers in the following contexts:

10 marks (CL - 07)

Provide evidence from the context to support your answer.

i. The teacher was delivering a lecture in class on an important topic in electrical circuit design. It was a large class of fifty students and all seemed to be involved in listening and paying attention to the board where a circuit had been drawn by the teacher. Asghar sketched a cartoon in his copy and passed it to Zahid who was sitting next him. They both passed a naughty smile.

Lack of interest and failure while grabbing attention is

shown in the above passage. Evidence: "... a circuit had been drawn ... sketched a cartoon"

ii. The parents were really annoyed to see the poor grades of their son, Tanveer, who was an active sports player but quite careless in studies. The father was angrily talking to Tanveer but he was avoiding the eye contact, looking around and down, with an occasional look at his hand held cell phone.

Target audience is uninterested and distracted by his gadget - Evidence: "The father was angrily talking to Tanveer ... hand held cell phone"

iii. The Chief engineer had called a meeting to address the delay in rectifying a major fault in the transmission grid. He had mailed earlier that the duty staff should come up with fact sheet and the possible solutions to the issues be offered. The meeting lasted for one hour where every member took speaking turns to provide solutions. When the meeting adjourned, Mr. Tariq and Mr. Aslam, the Shift In-charge Engineers, were heard saying that the meeting was quite boring and the things won't change easily.

~~Group of Unappreciated members~~

Evidence: "every group member took speaking
... quite boring and things won't change easily" 4

(b) Enlist five most important factors that should be kept in mind while preparing for persuasive speaking? 5 marks (CLO - 07)

Following factors should be kept in mind:

1) Attention grabber

2) Target Audience: before preparing a persuasive one should know if the audience is completely unfamiliar, partially aware or (strongly) in favor.

3) Audience shouldn't be annoyed.

4) Speech should be supported by strong facts and reasons.

5) Fallacies should be avoided.

Too general

2.5

Q2. (a) Recalling Tuckman's model of team development, describe through one example each stage, how groups would work to accomplish a professional task.

5 marks (CLO - 05)

Stages: Forming - Storming - Norming - Performing - Adjourning

Example: Forming a group for class project based on ~~the~~ designing a digital energy meter (4 members at max)

1) Selecting group members based on their interests and dividing project into different sub-categories.

sub-categories: ~~forming~~ ~~storming~~ ~~norming~~ ~~performing~~ ~~adjourning~~

~~Selecting Storming~~ Ayesha, Yasir, Ali and Nehal will work formed a group. Ayesha and Yasir ~~formed~~ on the programming side while Ali and Nehal will deal with the Hardware. Ayesha is made the team leader.

2- Storming: Different possible solutions for energy meter will be discussed- Participation of every group will be appreciated and encouraged.

3- Norming: Based on facts and figures, metering chips will be used and Assembly language will be used for programming purposes.

4- Performing tasks: Ayesha, being the team leader will keep a check on every group member, maintain harmony and ~~cooperate~~ cooperative behaviour.

5- Adjourning: After the meter is built, group will be adjourned.

(b) Assume that you are heading a team comprising two assistant engineers, one technician and one store in-charge. During a thunderstorm there was a sudden power surge followed by a shut down that resulted in the burning of the mains wiring to the offices. On inquiry, each of them blamed the other for not taking proper safety and emergency measures for such a natural happening. As their in-charge, how would you resolve the issue so that you could reach the facts that caused the incident and the team should take the incident professionally? Write five strategies.

5 marks (CLO - 05)

In case of

~~the~~ a natural disaster, I would act in the following ways to resolve the conflicts among team members:

1) collecting information of the degree to which thunderstorm caused damage and explaining it to my team members.

2) call a meeting and make team members understand the situation and take immediate steps to compensate the damage that ~~occurred~~ is caused by thunderstorm.

OR
3) Talk to every group member individually and stating the facts and warn him/her for non-professional behaviour.

4) Blaming each other won't help the damage being caused, it's not our fault and we could do nothing to stop a natural disaster.

5) Take precautionary measures for next time and cooperate with each other in a professional manner to rectify the damages.
