

National University of Computer and Emerging Sciences, Lahore Campus

	Course Name:	Complex Variables and Transforms	Course Code:	MT2003
	Program:	BEE	Semester:	Fall 2023
	Duration:	3 hours	Total Marks:	80
	Exam Date:	27 th December, 2023	Weight:	50
	Section:	ALL	Page(s):	2
	Exam Type:	Final Exam		

Student Name: Haseeb ur Rehman. Roll No. 22L-6234 Section: 3A

Instruction/Notes: 1. All CLOs are covered in this paper.
2. If need arises, make valid assumptions and clearly mention it with your answer.

Question 1 [10 marks, CLO1]

Electrical impedance is the ratio of voltage to current in ac circuits. Let Z represent the total impedance of an electrical circuit. If there are two resistors in a circuit are placed in parallel, the total impedance is given by following formula

$$\frac{1}{Z} = \frac{1}{Z_1} + \frac{1}{Z_2}$$

where $Z_1 = 3 + 6i$ ohms and $Z_2 = 5 + 4i$ ohms.

- [2 marks] Find the total impedance of the electrical circuit in terms of polar form.
- [5 marks] Use part (a) to find the fourth root of a given complex number and graph all roots in the complex plane. Show complete working.
- [3 marks] Use part (a) to find the principal value of $\ln Z$.

Question 2 [10 marks, CLO2]

Verify that given function is harmonic? If yes then develop harmonic conjugate function and also write the corresponding analytic function in form of $f(z) = u + iv$.

$$u(x, y) = e^x \cos y + e^y \cos x + xy.$$

Question 3 [30 marks, CLO3]

- [10 marks] Evaluate the given integral by using Cauchy integral formula along the given contour C , where C represents the circle $C: |z|=2$ in counterclockwise direction.

$$\oint_C \frac{ze^z}{z^2 + 1} dz$$

- [10 marks] Evaluate the given real integral by using the Cauchy Residue theorem and also mention the type.

$$\int_0^\pi \frac{1 + \cos 2\theta}{(5 + 4\cos\theta)} d\theta$$

- c. [10marks] Evaluate $\oint_C |Z|^2 dz$ by using second evaluation method along the given contour C as shown in figure, where C consists of the boundaries of the squares counter clockwise. Show the complete working.

Question 4 [30 marks, CLO4]

- a. [10 marks] Find the Fourier series coefficients of the periodic function $E(x)$. Express $E(x)$ as a Fourier series form.

$$E(x) = \begin{cases} \pi + x, & -\pi < x < 0 \\ \pi - x & 0 < x < \pi \end{cases}$$

- b. [10 marks] Find Fourier cosine integral representation of the given function

$$f(x) = \begin{cases} x^2, & 0 < x < a \\ 0 & x > a \end{cases}$$

- c. [10 marks] Find Fourier sine transforms of the signals represented by the given function

$$f(x) = \begin{cases} 3, & 0 < x < 2 \\ 2 - x, & 2 < x < 4 \\ 0 & x > 4 \end{cases}$$
